## **Basics**

C	ما	ect
J	CI	CUI

release-1 drag-1	Move caret. Select text.	The element containing the caret is said to be <i>implicitly selected</i> . Most com- mands work whether an element has been implicitly or explicitly selected.		
Alt-drag-1 Shift-click-1	Inside the selection, drag the selection. Outside the selection, select the element clicked upon then drag it. Extend node selection if any, text selection otherwise.	Cmd-click-1	Select the node clicked upon. Repeating this action without moving the mouse selects its parent, then its grand-parent, etc.	
double-click-1	Select word.	Cmd-UP	Select parent.	
triple-click-1	Select all the characters of the text node.	Cmd-DOWN	Select child.	
Ctrl-press-1	Show the <b>Edit</b> popup menu.	Cmd+Shift-UP	Select preceding sibling.	
Drop	If the data being dropped is an URL or an absolute filename, then open	Cmd+Shift-DOWN	Select following sibling.	
•	the corresponding document. Otherwise, unless the drop target imple-	ESCAPE LEFT	Extend selection to preceding sibling.	
	ments a specific behavior (e.g. an external link element), display a popup	ESCAPE RIGHT 📩	<ul> <li>Extend selection to following sibling.</li> </ul>	
	menu allowing to copy or move the data being dropped.	ESCAPE DOWN	Select all children.	
RIGHT	Move caret to following character.	ESCAPE ESCAPE	Cancel selection.	
LEFT	Move caret to preceding character.	Alt-LEFT	Go back in the navigation history.	
DOWN	Move caret to following line.	Alt-RIGHT	Go forward in the navigation history.	
UP	Move caret to preceding line.	Edit		
END	Move caret to end of line.	2000		
HOME Cmd-RIGHT	Move caret to beginning of line. Move caret to following word.	click-2 ☆	Move caret to the location clicked upon, then paste last selected charac-	
Cmd-LEFT	Move caret to preceding word.		ters before caret position. Corresponding option must have been turned	
	Move caret to following text node.		on.	
Shift-TAB	Move caret to preceding text node.	Cmd-Z	Undo last change.	
Shift-RIGHT	Extend text selection to following character.	Cmd-Y Cmd-A ☆	Undo last undo (redo). Repeat last repeatable command.	
Shift-LEFT	Extend text selection to preceding character.	Cmd+Shift-A	Show command history. Allows to select and repeat a command.	
Shift-DOWN	Extend text selection to following line.	Cmd-X	Cut selected text or nodes.	
Shift-UP	Extend text selection to preceding line.	Cmd-C	Copy selected text or nodes.	
Shift-END	Extend text selection to end of line.	Cmd+Shift-P	Copy explicit text or node selection as plain text.	
Shift-HOME	Extend text selection to beginning of line.	Cmd-U	Paste before selected nodes.	
Cmd+Shift-RIGHT	Extend text selection to following word.	Cmd-V	Paste replacing selected nodes if any. Otherwise paste at caret position.	
Cmd+Shift-LEFT	Extend text selection to preceding word.	Cmd-W	Paste after selected nodes.	
Ctrl-TAB	Insert a tab character if the element preserves space characters. Other-	Cmd-K	Delete selected text or nodes.	
ENTER	wise, no effect. Insert a newline character if the element preserves space characters.	Cmd-R	Replace selected nodes by an element or a text node.	
	Otherwise, no effect.	Cmd-B	Insert an element or a text node before selected nodes.	
Ctrl-SPACE	Insert non-breaking space.	Cmd-I	Insert an element or a text node at caret position.	
DELETE	Delete selection if any, character following caret otherwise.	Cmd-J F1 📩	Insert an element or a text node after selected nodes. Insert a text node after selected nodes.	
BACK_SPACE	Delete selection if any, character preceding caret otherwise.	Shift-F1	Insert a text node before selected nodes.	
Cmd-DELETE	Delete selection if any, word following caret otherwise.	Cmd-F1	Insert same element after selected nodes.	
Cmd-BACK_SPACE	Delete selection if any, word preceding caret otherwise.	Cmd+Shift-F1	Insert same element before selected element.	
File		ESCAPE i	Switches from insert mode to overwrite mode and the other way around.	
File		Cmd-T	Convert selected text or nodes to another element or to plain text.	
Cmd-N	New document.	Cmd+Shift-T	Wrap selected text or nodes into a new parent element.	
Cmd-O	Open document.	ESCAPE 1	Converts selected text to lower case. If no text is selected, operates on	
Cmd+Shift-O ☆	Open folder containing last opened document.		word containing caret.	
Cmd-S	Save document.	ESCAPE u	Converts selected text to upper case.	
Cmd-P	Print document.	ESCAPE c	Changes the first letter of all words found in selected text to upper case.	
Cmd-Q	Quit XMLmind XML Editor.			

ESCAPE n 🚧	Inserts at caret position a <i>character</i> specified using its entity name (e.g. $mdash$ ).	Alt-PAGE_UP Alt-PAGE_DOWN	Switch to preceding document tab. Switch to following document tab.		
Modular documents		Help			
Cmd+Shift-C			If an XHTML document is opened		
Cmd+Shift-I Cmd+Shift-B	reference elsewhere to build a modular document.) Using the <b>Include</b> tool, insert an element reference at caret position. Switch to window containing referencing document (the modular docu-	Shift-ENTER F5	Insert a $br$ element at caret position. Preview the document being edited in the Web browser.		
Cmd+Shift-E	ent), if any. witch to window containing referenced document (the module). Open	If a DocBook 5+ document or an assembly is opened			
Search	this document if needed to.	Cmd+Alt-C	Copies to the clipboard a reference to the selected nodes. Useful when the reference is intended to be pasted to <i>several different locations</i> in the same degree to the selected nodes.		
Cmd-F	F Search text using the "Search" tool.		the same document. If an XHTML, DocBook document or a DITA topic is opened		
Cmd+Shift-F Cmd-M	Search text backwards. Search/replace text.				
Cmd+Shift-M Cmd-G	Search/replace text backwards. Repeat previous search.	Cmd+Alt-click-1 Alt-drag-1	Follow link clicked upon. Inside an external link, drag its target URL. Inside an image, drag its source URL.		
Cmd+Shift-G ESCAPE s ESCAPE f	CAPE s Search text. Mainly useful when recording macros.		Onto an image, change its source. Onto an external link, change its tar- get.		
ESCAPE F ESCAPE r ESCAPE r	Find element backwards. Find and replace element. Find and replace element backwards.	ENTER	Insert a newline character if possible. Otherwise, if caret is at the begin- ning of a paragraph, list item or a few other kinds of block, insert same block before. Otherwise, if caret is at the end of a block, insert same block after. Otherwise, split block.		
ESCAPE g ESCAPE G ESCAPE h	Find next element. Find previous element. Replace next element.	DELETE	Delete selection if any. Otherwise, if caret is at the end of a paragraph, list item or a few other kinds of block, join with following block. Otherwise, delete character following caret.		
ESCAPE H ESCAPE X	Replace previous element. Select nodes by evaluating an XPath expression returning a nodeset. Mainly useful when recording macros.	BACK_SPACE	Delete selection if any. Otherwise, if caret is at the beginning of a para- graph, list item or a few other kinds of block, join with preceding block. Otherwise, delete character preceding caret.		
View		Cmd-ENTER	Add same block after the paragraph, list item or a few other kinds of block which is the ancestor of selected node.		
Cmd-L Cmd+Shift-L	Rebuild document view (deep redraw). Center selection on screen.	Cmd+Shift-ENTER	Add same block before the paragraph, list item or a few other kinds of block which is the ancestor of selected node.		
Cmd-wheel	Changes the size of the text in the document view.	Alt+Shift-LEFT	Convert a paragraph to a list item and a list item to a paragraph, the new element having a lesser nesting level than the original one.		
Tools		Alt+Shift-RIGHT	Convert a paragraph to a list item and a list item to a paragraph, the new		
Cmd-E Cmd+Shift-V Cmd+Shift-H Cmd+Shift-D ESCAPE m ESCAPE q ESCAPE p ESCAPE x	Edit the attributes of selected element. Check document validity. Open element or attribute content in helper application. Edit document in helper application. Start/stop recording of macro. Cancel recording of macro. Execute (replay) recorded macro. Execute command. Requires specifying its name and parameter.	Alt+Shift-UPSwap explicitly selected node with its preceding sibling (move up).Alt+Shift-DOWNSwap explicitly selected node with its following sibling (move down).			
Tab					
Cmd+Shift-W	Close current document tab.
